

Do you need to capture time-critical documents from remote offices? Do your employees receive small numbers of documents at varying times? Do you have to ship documents to a central site to launch a business process? If your enterprise must capture transactional data from many different sources, Ascent Ricochet provides an economical way to deliver this valuable information immediately into your business workflow.

For example, Ascent Ricochet enables you to move new loan applications or insurance claims into the appropriate business process right away. The loan officer or claims adjuster just uses Ascent Ricochet, a web browser and a desktop scanner or office copier.

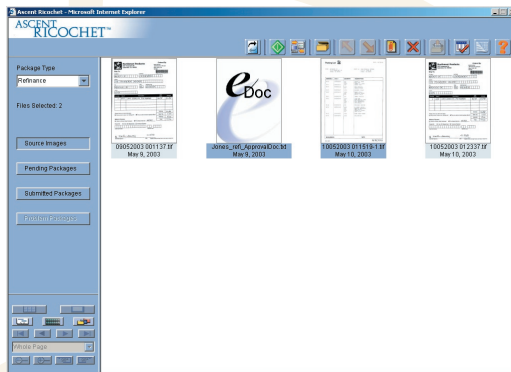

The documents enter the business workflow immediately, instead of being stalled overnight while the courier transports the documents to a central office. Ascent Ricochet dramatically increases your process speed, slashes the costs of filing and shipping, and lets your employees make better use of their time.

Empowers Content Experts Everywhere.

No one knows more about a document than the people who created it or who work closely with the information it contains. That's why Ascent Ricochet enables them to index their documents for later retrieval and processing. By letting the best-qualified person classify their own documents, Ascent Ricochet speeds up the workflow and ensures more accurate document classification.

Scan Right From Your Desk

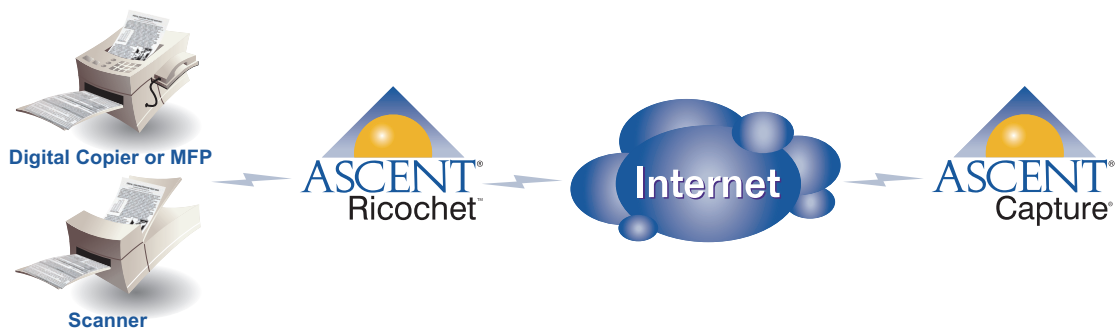

Ascent Ricochet lets you scan your documents easily and reliably with any VRS™-enabled scanner. VRS from Kofax guarantees the best-possible image, which Ascent Ricochet immediately displays for indexing and delivery into your business workflow

Import Through Digital Copiers and Multi-Function Peripherals (MFPs)

Don't have scanners at all your remote locations? No problem. Ascent Ricochet can also take advantage of existing digital copiers and MFPs for easy ad hoc document capture. Just walk your document to the nearest networked copier, and scan the image to your network share. When you return to your desk, Ascent Ricochet will display the scanned documents for indexing and delivery.

Index and Send Documents Easily

After scanning or importing documents into Ascent Ricochet, simply select the "package type" from the pull-down list and fill in the associated index fields. Need to attach an electronic document such as a spreadsheet? Again, no problem. Ascent Ricochet supports electronic attachments. Once you're done, just click Send. It's that easy.

Eliminate Overnight Shipping.

Ascent Ricochet enables your distributed workforce to deliver documents into your business-critical workflow immediately. This distributed capture solution provides instant data transmission without the costs and delays of physical shipment.

Harness the Power of Ascent

Ascent Ricochet is built on the power of Ascent, the world's most popular information capture platform and the recognized "Operating System of Capture." Ascent Capture automatically imports data from Ascent Ricochet and performs additional indexing, verification or release as defined by the central Ascent administrator. Ascent Ricochet extends the quality and power of Ascent to the remote offices that need a low-volume, ad hoc capture solution.

System Requirements

- Ascent Capture Version 5.51 or later • Microsoft IIS Server Version 5.0 or later
- Microsoft Internet Explorer Version 5.5 or later • VRS 3 or later (to scan)
- Client: Windows XP or 2000 • Server: Windows 2000 Server
